

Architecture Topology - Computer Node View

Literal computer-node topology for the isolated UTM SOC lab.

UTM Virtual Network: 192.168.64.0/24

Splunk Manager

Windows Endpoint

Kali Endpoint

WinEventLog + Sysmon -> 9997

auth.log + syslog -> 9997

SOC Analyst

SWITCH

Evidence Output

192.168.64.2

Sysmon + Splunk UF

192.168.64.1

Splunk Enterprise / SignalScope

attack simulation + report evidence -> 192.168.64.4

SSH + Splunk UF

Security boundary: endpoint telemetry stays inside the UTM virtual network and forwards only to the Splunk Manager.

127.0.0.1:8765

PDF report diagrams

Architecture Topology - Detailed Telemetry and Attack Flow

Telemetry, analyst, and controlled attack paths used during the SOC capstone validation.

UTM Shared Virtual Network - 192.168.64.0/24
